CERTIFICATE OF MAILING

I hereby certify that this correspondence is being
Faxed to the United States Patent and Trademark Office
at 703-872-9306 on 08 September 2004.

Paula Faulk Hurley

Attorney Docket No.: VASC 1000-12 US

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application Inventors: Menno Kalmann SC/Serial No.: 09/691,817 Confirm. No.: 5259 Filed: October 18, 2000 Title: ASSEMBLY FOR TREATING BLOOD VESSELS AND A METHOD THEREFOR	<u>PATENT APPLICATION</u> Examiner: David J. Isabella Art Unit: 3738 <u>Customer No. 22470</u>
---	---

INFORMATION DISCLOSURE STATEMENT UNDER 37 C.F.R. §1.56

Mail Stop Amendment
Commissioner for Patents
P. O. Box 1450
Alexandria, VA 22313-1450

Sir:

It is requested that the information identified in this statement be considered by the Examiner and made of record in the above-identified application. This statement is not intended to represent that a search has been made or that the information cited in the statement is, or is considered to be, material to patentability as defined in 37 C.F.R. 1.56.

Since this is a continuation, divisional or continuation-in-part application, it is understood that the Examiner will consider all information which was considered by the Office in a parent application. MPEP 609.

Enclosed with this statement is a Form PTO/SB/08A. The Examiner is requested to initial the form and return it to the undersigned in accordance with M.P.E.P. 609.

Also enclosed with this statement is a copy of each cited document as required by 37 C.F.R. 1.98. However, since this application was filed after June 30, 2003, copies of U. S. Patents and U. S. Patent Application Publications are not enclosed. (See O. G. Notice of August 5, 2003.) The two U. S. patents cited herein correspond to References 2 and 4 of the Japanese office action.

For foreign language documents cited in a search report by a foreign patent office, the requirement for a concise explanation of relevance is satisfied by the submission herewith of an English language version of the search report from the Japanese Patent Office mailed June 8, 2004. MPEP 609A(3).

If a written English-language translation of a non-English language document, or portion

thereof, is within the possession, custody or control of, or is readily available to any individual designated in 1.56(c), a copy of the translation accompanies this statement, 37 C.F.R. 1.98(a)(3)(ii), and satisfies the requirement for a concise explanation of relevance, MPEP 609A(3). Attached to Reference B1 (JP 04218154) is a translation regarding the description of the drawings. Attached to Reference B2 (JP 61-220648) is a translation for parts and elements indicated by the numerals in the drawings.

This statement should be considered under 37 C.F.R. 1.97(c) because it is being filed before the mailing date of a FINAL office action, a Notice of Allowance, or an action that otherwise closes prosecution in the subject application, whichever occurs first, AND one of the following statements as set forth in 37 C.F.R. 1.97(e) applies:

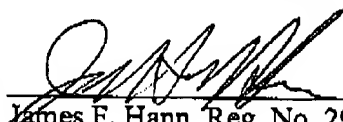

X (1) That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement; or

____ (2) That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in § 1.56(c) more than three months prior to the filing of the information disclosure statement.

Fee Authorization. The Commissioner is hereby authorized to charge underpayment of any additional fees or credit any overpayment associated with this communication to Deposit Account No. 50-0869 (VASC 1000-12). A duplicate copy of this authorization is enclosed.

Respectfully submitted,
Haynes Beffel & Wolfeld LLP

TRANSLATION OF THE OFFICIAL ACTION

Patent application No. 511645/1996
Drafted: May 26, 2004
Examiner: Hiroaki HIRAI
Attorney(s): Hisao OKUYAMA, and three others
Applied provision(s): Section 29 (2) of Patent Law

This application is deemed to be rejected for the following reasons. If any argument is to be presented, please submit a Statement of Argument within three months from the date of mailing. (Translator's note: Headings in square brackets are added for ease of understanding.)

REASONS

[LACK OF INVENTIVE STEP] The present invention of this application claimed in the claim(s) pointed out below is unpatentable under the provision of Section 29 (2) of Patent Law, since this invention could have been easily thought of by anyone who had general knowledge in this art field based on the invention described in the publication(s) listed below which was/were distributed in Japan or in a foreign country before the filing date.

REMARKS

Claims 1, 2 and 4-6
References 1 and 2

Reference 1 describes an artificial blood vessel comprising "a shape memory alloy of U-shaped type (b)" (corresponding to "diameter arranging means" of the present invention, referring to Fig. 1(b) of reference 1), "a catheter" (corresponding to "introducing means"), and "artificial blood vessel inserting part sheath" (corresponding to "sheath-like protective cover"). The transformation temperature of the shape memory alloy is described to be set slightly lower than body heat (refer to claims).

Reference 2 describes "a nose piece (772)" corresponding to "blood vessel widening means" and "bunging means" (refer to page 28, line 16).

Therefore, it would not have been very difficult to

arrange the structure described in claims 1, 2 and 4-6 by combining References 1 and 2.

Claim 3

References 1-3

Reference 3 describes diameter arranging means having a "ring cover (4)" corresponding to "expandable gauze". Therefore, it would not have been very difficult to arrange the structure described as claim 3 by applying this component to the artificial blood vessel described in Reference 1.

Claims 7 and 8

References 1-4

Reference 4 describes a structure having a "balloon (183A, 183B)" corresponding to "pressure exerting means".

Comments by Okuyama & Co.

9-173

In this Office Action the Examiner rejected all pending claims (claims 1-8 based on your letter of September 4, 2002) for lack of inventive step over the following four references.

Reference 1 (JP 4-218154 A) has no patent family. We are attaching a copy of the English abstract from JPO. In addition, our translation regarding the description of drawings is as follows:

Figs. 1(a) and 1(b) are perspective views of preferred embodiments of an artificial blood vessel according to the present invention with a shape memory alloy of a spiral type (s) or a U-shaped type (b);

Fig. 2 is a sectional view of the artificial blood vessel shown in Fig. 1(a), wherein the shape memory alloy (s) is incorporated into a polyurethane material of tube (p);

Fig. 3(a) shows a delivery catheter enable to load the contracted artificial blood vessel therein for introducing the artificial blood vessel into a blood vessel;

Figs. 3(b) and 3(b') show a catching catheter enable to grasp the artificial blood vessel, Fig. 3(b) being an enlarged view of a grasping part of it, Fig. 3(b') being an enlarged view of a controlling handle part of it;

Fig. 3(c) shows a folded pulling wire inserted into a guiding catheter;

Fig. 4 shows a method for introducing and placing the artificial blood vessel at a prescribed position of a blood vessel;

Fig. 4-1 shows that the catching catheter (G) inserted from one side of a blood vessel grasps the folded pulling wire (W) inserted from the other side of it;

Fig. 4-2 shows that the grasping part of the catching catheter (G) is pulled out of the other side of the blood vessel by pulling the pulling wire (W) back;

Fig. 4-3 shows that the artificial blood vessel (SAP) loaded in the delivery catheter (T) is introduced in the blood vessel by pulling the catching catheter (G) back; and

Fig. 4-4 shows that the artificial blood vessel (SAP) kept to be grasped with the catching catheter (G) is expanded and placed at a prescribed position of the blood vessel by pushing the artificial blood vessel by a pushing rod.

Reference 2 (JP 8-502428 T) corresponds to international publication No. WO 94/12136 published on June 9, 1994. We are attaching a copy of the front page of this international publication.

Reference 3 (JP 61-220648 A) does not have any commercially available English abstracts. Our translations for parts and elements indicated by the numerals shown in the drawings is as follows:

- (1) artificial blood vessel,
- (2) main body made from polyester fiber or polytetrafluoroethylene,
- (3) anchoring ring made from a shape-memory alloy,
- (4) ring cover made from the same material as main body,
- (5) groove for ease in anchoring,
- (6) natural blood vessel, and
- (7) cut line for transformation of ring.

Reference 4 (JP 5-344989 A) corresponds to U.S. Pat. No. 5,316,023. We are attaching a copy of the front page of this U.S. patent document.

We look forward to receiving your instructions as to how we may respond to the outstanding Action. If you have any questions or need more information, please do not hesitate to let us know.
